A “pin” is like a visual bookmark and a “board” is a collection of related pins.

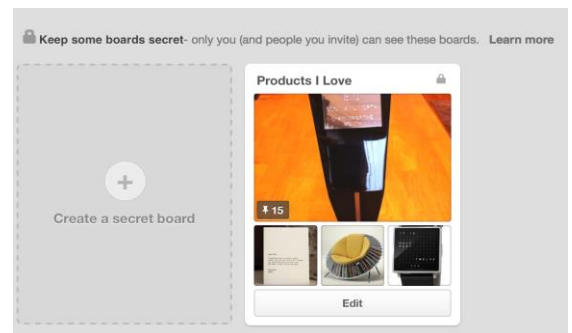

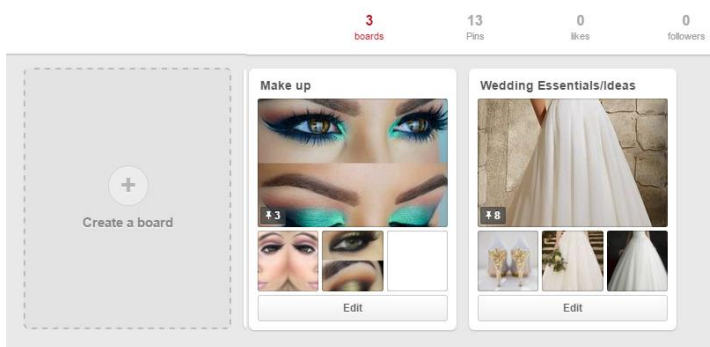

You can follow friends, just like on Facebook or Twitter.

Repinning is the equivalent of a “retweet”.

Saving a pin posts that pin to one of your boards.

Boards are public by default.

Create group boards so that others can post to that board.

Secret boards are only visible to people you invite.

All other boards are public.

Turn on “search privacy” to remove your pins from Google. This process may take a few months to complete.
